The modified PEG ratio does take dividends into consideration. As an example, if you were to calculate the return of all Dividend Aristocrats since and only looked at the ones that are still Dividend Aristocrats you would have survivorship bias in your study.

Andsothiswholethingisgoingtobeanirrationalnumber,butI'llprovethat  
If you take any of the diagonals of a regular pentagon, so right over here, if you take this diagonal right over here, the ratio of this green side to--and when I'm Magic of Geometric FINANCE about the diagonals, ones that actually aren't one of the edges-- the ratio of any of the diagonals to any of the sides is once again, this golden ratio. This might seem boring, but answering this will help us with some other serious problems:
